

ACOUSTIC PANEL

TECHNICAL DATA SHEET

August 2019

The acoustic panels ensure excellent sound performance. They are the ideal choice for controlling the reverberation time in any space that requires better acoustics.

MADE TO MEASURE

The Acoustic Panels are fully made to measure, enabling you to pick the frame type, filling, fabric and size of your choice. Every project needs a different approach, so depending on the purpose of the panels, you can combine fillings and fabrics to tune the panel exactly to your needs. Keep this in mind when selecting your upholstery fabric.

CHOOSE YOUR FRAME

- A visible frame (aluminium Print Frame)
- An invisible frame (wood)
- No frame (PES wool)

CHOOSE YOUR FILLING

The panels can be made from different types of acoustic materials, each with their own specific characteristics and absorption coefficients ranging from 0.55 to 1.00.

Options are:

- PES wool
- recycled cotton
- mineral wool

UPHOLSTERY FABRICS

Aesthetics are important in every interior project, so a great top layer fabric can be the cherry on the cake. Choose between a single-coloured fabric to make the panels blend in with the rest of your interior or print them with a custom design to make them stand out completely!
